polycyclic disease, such as apple scab, in which the blossoms and the fruit are infected at different, separate times. The progress of an epidemic measured in terms of the numbers of lesions/ the amount of diseased tissue, or the numbers of diseased plants plotted over time is called the disease's "progress curve.

In this text we will use "epidemic" to denote the dynamics of disease, that is, the change in the amount of disease with time. By "amount" of disease we mean either incidence (the number of plants or plant parts affected), severity (the amount of tissue affected), or a combination of both.

### **Plant Disease Epidemiology: Temporal Aspects**

Plant disease epidemiology is the study of disease in plant populations. Much like diseases of humans and other animals, plant diseases occur due to pathogens such as bacteria, viruses, fungi, oomycetes, nematodes, phytoplasmas, protozoa, and parasitic plants.
