To compare these two processes in more detail, we investigated molecular and biochemical changes in broccoli florets stored at two different temperatures after harvest. We found that storage at cooler temperatures delayed the symptoms of senescence at both the biochemical and gene expression levels.

The Apocynaceae plant family, which contains the important medicinal plant Madagascar periwinkle (*Catharanthus roseus* G. Don), is characterized by the large variety of monoterpenoid indole alkaloids that it produces. The alkaloid chemistry of many members of this family has been well characterized and several thousand structures have been elucidated.
