To date, 79 species of natural enemies of the brown planthopper have ... ecology and biology of natural enemies, or to surveys of natural enemies to ...

Biological control of the brown planthopper

A planthopper is any insect in the infraorder Fulgoromorpha , exceeding 12,500 described species worldwide. The name comes from their remarkable resemblance to leaves and other plants of their environment and from the fact that they often "hop" for quick transportation in a similar way to that of grasshoppers . However, planthoppers generally walk very slowly so as not to attract attention.

Planthoppers - Revolv

The two planthoppers partition their cordgrass host plant, with *D. penedetecta* feeding more on the basal stems (particularly females) and *P. dolus* occurring most often on the canopy leaves. Notably, there was no evidence for niche shifting in *D. penedetecta* because its distribution on the plant did not change in the presence or absence of *P* ...

Competition as a factor underlying the abundance of an

Status of planthoppers as rice pests have changed depending on time in the tropics. Before the Green Revolution , the brown planthopper (BPH), *Nilaparvata lugens*, was one of the minor insect pests in the tropical paddy fields (Dyck and Thomas 1979; Heinrichs and Mochida 1984).International Rice Research Institute (IRRI) was founded in the Philippines in 1960.
