### **playas of the great pdf**

Playa Area and Diversity Relationships – For all plant species there were only marginal ( $r < 0.1$ ) relationships between area and richness. Playa density only explained slightly more of the diversity relationship. – Relationship for just wetland plants was much stronger because large playas stay wet longer.

subsequently nest on the playa margin. These developments are typical in the life history of a playa and occur in thousands of playas each year. The climate of the Great Plains dictates this condition. Playas need this hydrologic (i.e., flooding/drying) disturbance to re-main productive and be the key sites of biodiversity that they are.
