

population viability analysis pdf

Population viability analysis represents a "fine filter" approach to conservation planning compared to the coarse filter approach, which posits that the majority of species can be protected by conserving examples of natural vegetation communities (Noon et al. 2003).

grist for a population viability analysis. We hope that awareness of the possible use of monitoring data in PVA will lead TNC/Heritage biologists to consider ways that their monitoring schemes can maximize the usefulness of monitoring data for future viability assessments, without entailing costly changes in existing monitoring protocols.
