## The Designer's Guide To Tungsten Carbide

In chemistry, a carbide is a compound composed of carbon and a less electronegative element. Carbides can be generally classified by the chemical bonds type as follows: (i) salt-like, (ii) covalent compounds, (iii) interstitial compounds, and (iv) "intermediate" transition metal carbides. Examples include calcium carbide (CaC<sub>2</sub>), silicon carbide (SiC), tungsten carbide (WC; often called ...

## 3 Materials - Welcome to NYC.gov

Silicon nitride is a chemical compound of the elements silicon and nitrogen. Si<sub>3</sub>N<sub>4</sub> is the most thermodynamically stable of the silicon nitrides. Hence, Si<sub>3</sub>N<sub>4</sub> is the most commercially important of the silicon nitrides and is generally understood as what is being referred to where the term "silicon nitride" is used. It is a white, high-melting-point solid that is relatively chemically ...

## Silicon nitride - Wikipedia

Tape casting is a well-established technique to fabricate ceramic tapes. This technique has been usually applied to produce dense substrates for electronic applications, but recently there are increasing efforts regarding the production of porous cast tapes.

## Manufacturing porous ceramic materials by tape casting

2 With carbon into new dimensions " made by SGL Group SGL Group " The Carbon Company " is a leading global manufacturer of carbon- based products.

## CARBOPRINT With Carbon into New Dimensions

A design-to-device study, based on algorithmic encodings of structure-property relationships, is used to identify new materials with panchromatic optical absorption. 9431 dyes are mined from the literature and optimally paired together to afford co-sensitizing dyes with complementary optical absorption properties. Promising combinations are experimentally verified in dye-sensitized ...

A new chemical process is developed to prepare strongly ferromagnetic SmCo<sub>5</sub> nanoparticles (NPs) via controlled reduction of SmCo<sub>5</sub>O<sub>7</sub> multipods. The 200 nm SmCo<sub>5</sub> NPs embedded in polyethylene glycol are aligned magnetically and show the room temperature coercivity of 49.2 kOe. The synthetic method has also been extended to prepare ferromagnetic Sm<sub>2</sub>Co<sub>17</sub> and Sm<sub>2</sub>Fe<sub>17</sub>N<sub>3</sub> NPs.
