Systems theory not only allows us to take a better look at a problem, but it also helps us to identify why there is a problem. If doctors were to only treat the symptoms of people and never the disease, we would never fully recover from an illness. Identifying not just the problem but

compartmental systems constitute a subclass of positive linear systems, see [3] and [9]. Then results on stabilization of linear compartmental systems are invoked to solve the original stabilization problem.

Basically, systems thinking is a way of helping a person to view systems from a broad perspective that includes seeing overall structures, patterns and cycles in systems, rather than seeing only specific events in the system.
