Probability Theory With Applications in Science and

Many of our applications lie outside the scope of conventional probability theory as currently taught. But we think that the results will speak for themselves, and that

PROBABILITY THEORY THE LOGIC OF SCIENCE

In probability theory, the convolution of f_X and f_Y is the probability density function of the sum $Z := X+Y$ of the independent random variables X and Y . The result of the above exercise implies that the sum of two independent exponentially distributed random variables with the same parameter c has a gamma distribution with parameters $\hat{\mu} = 2 \dots$
