Plants need ammonia (NH<sub>3</sub>) to build amino acids. N<sub>2</sub> most common atmospheric form Plants lack the ability to convert gaseous nitrogen to ammonia. some bacteria have the ability A mutualism between legumes and nitrogen-fixing bacteria allow atmospheric N to be captured and made available to the plant.

Heterotrophic nutrition in plants *Cuscuta* (Amarbel) is a parasite, which obtains food from host plant. Pitcher plant is an insectivorous plant (insect-eating plant). Its leaf gets modified into a pitcher-like structure, which traps the insects. It has both autotrophic and heterotrophic mode of nutrition. Fungi are saprotrophs.

Chlorine Nutrition of Higher Plants 945 root > seed > i-ber; for rice the sequence was: shoot > crust > brown rice > root; and for lettuce it was: leaf > shoot > root. The distributions of Cl in soybean, tobacco, tea tree, straw, and amaranth are also similar to the above crops. The concentrations of Cl in higher plants have been reported by several researchers.

In this chapter, a brief overview of the history of plant mineral nutrition is provided.

### **(PDF) Mineral Nutrition of Plants - ResearchGate**

Potassium-deficient plants exhibit chlorosis (loss of green color) along the leaf margins or tips starting with the bottom leaves and progressing up the plant. In severe cases, the whole plant turns yellow, and the lower leaves fall off. As with other nutrients, lack of potassium causes stunted plants with small branches and little vigor.

How is plant analysis used as a diagnostic tool? Plant analysis consists of testing nutrient concentrations in specific plant parts during specific growth stages (Jacobsen and Jasper, 1991). If nutrient concentrations in a sample are below or above an established sufficiency range, then the plant is deficient or in excess for that element.

At adequate levels of supply, Cl improves the yields and quality of many crops such as onions and cotton if the soils are deficient in this nutrient. When excessive, Cl can be as a major component of salinity stress and toxic to plants. This paper provides a brief review of current progresses on Cl nutrition of higher plants.
