Water treatment is any process that improves the quality of water to make it more acceptable for a specific end-use. The end use may be drinking, industrial water supply, irrigation, river flow maintenance, water recreation or many other uses, including being safely returned to the environment. Water treatment removes contaminants and undesirable components, or reduces their concentration so ...

Fouling is the accumulation of unwanted material on solid surfaces to the detriment of function. The fouling materials can consist of either living organisms or a non-living substance (inorganic and/or organic). Fouling is usually distinguished from other surface-growth phenomena, in that it occurs on a surface of a component, system or plant performing a defined and useful function, and that ...

1. Introduction. Since 1960s, when the first commercial membrane was invented via phase inversion method, significant milestones in the development of membrane separation technologies have been scientifically and commercially achieved. Following the remarkable invention, several major processes including reverse osmosis, ultrafiltration, microfiltration and gas separation have been established ...
