Somatic Embryogenesis and Organogenesis for Regeneration

Because the protocol developed herein allows cultivation of Moso bamboo embryonic callus with minimal browning and preserves somatic embryogenesis capability in calli and because its results remained useful for over one year, building a genetic transformation platform through the formation of Moso bamboo embryoids is feasible.

SOMATIC EMBRYOGENESIS INDUCTION Explants The most competent inocula for somatic embryogenesis induction are mature and immature zygotic embryos (Radojevic et al., 1975), cotyledonary portions from mature seeds and cotyledonary nodes from mature seedlings (Perez et al., Berros et

al.,1995).

Somatic embryogenesis. Somatic embryogenesis is a process by which somatic (non-gametic) cells undergo differentiation to form a bipolar structure containing both root and shoot axes.

Somatic embryogenesis - an overview | ScienceDirect Topics

Formation of embryos from somatic cells by a process resembling zygotic embryogenesis is one of the most important features of plants. In 1958, Reinert in Germany and Steward in USA independently reported somatic embryogenesis in carrot cultures.

Step Wise Protocols for Somatic Embryogenesis of Important

Somatic embryogenesis is a developmental process where a plant somatic cell can dedifferentiate to a totipotent embryonic stem cell that has the ability to give rise to an embryo under appropriate conditions.
