In N,N-dialkylhydrazones the C=N bond can be hydrolysed, oxidised and reduced, the N-N bond can be reduced to the free amine. The carbon atom of the C=N bond can react with organometallic nucleophiles. The alpha-hydrogen atom is more acidic by 10 orders of magnitude compared to the ketone and therefore more nucleophilic. Deprotonation with for instance LDA gives an azaenolate which can be ...

Fomepizole, also known as 4-methylpyrazole, is a medication used to treat methanol and ethylene glycol poisoning. It may be used alone or together with hemodialysis. It is given by injection into a vein. Common side effects include headache, nausea, sleepiness, and unsteadiness. It is unclear if use during pregnancy is safe for the baby. Fomepizole works by blocking the enzyme that converts ...

This review covers the many conjugate addition enantioselective protonation reactions that have been reported in the literature. These reports have been grouped by class of Michael acceptor and further subdivided by the type of catalyst system used (Lewis acids, organocatalysts and transition metals).

### **Conjugate addition enantioselective protonation reactions**

Over the past few decades organic chemistry has seen tremendous progress and this has enabled the synthetic chemist to assemble virtually any molecular structure imaginable given reasonable time and sufficient resources.

The unique properties of rare earth metals is dominantly expanding its application and are needed to supply

the required functionality in many high-tech components, green technologies and material industries of high-temperature superconductors, secondary batteries, hybrid cars, etc.
