Quantitative characterization of ligand binding (Book

The direct observation of dynamic ligand exchange between Pt^{IV} coordination-driven self-assembled supramolecular polygons (triangles and rectangles) has been achieved using stable ¹H/²D isotope labeling of the pyridyl donors and electrospray ionization mass spectrometry combined with NMR ...

Direct and Quantitative Characterization of Dynamic Ligand

Furthermore, quantitative mass spectral results acquired over time allow for the kinetics of supramolecular dynamic ligand exchange to be determined. Analysis of the data (Figure S7 and Table S1 in Supporting Information) shows a first-order kinetic process with a rate of $k = 0.0024 \text{ h}^{-1}$ for the dynamic ligand exchange between 5a and 5b as shown in Figure 3 ($R^2 = 0.99$).

A quantitative characterization of the yeast

X-ray photoelectron spectroscopy (XPS) is a nearly universal method for quantitative characterization of both organic and inorganic layers on surfaces. When applied to nanoparticles, the analysis is complicated by the strong curvature of the surface and by the fact that the electron attenuation length can be comparable to the diameter of the nanoparticles, making it necessary to explicitly ...
