This course develops logical, empirically based arguments using statistical techniques and analytic methods. Elementary statistics, probability, and other types of quantitative reasoning useful for description, estimation, comparison, and explanation are covered. Emphasis is on the use and limitations of analytical techniques in planning practice.

Quantitative Reasoning & Statistical Methods for Planners

where the plan distance $\text{Dist}: [0,1]$ is a measure of the dissimilarity between two plans. This formula is a direct adaptation, for the purposes of plan comparison, of the 1case diversity formula proposed by Smyth and McClave [18] , as Dist can be considered to be the complement of a similarity measure $\text{Sim}: (2)$
