Quantum dots (QD) are very small semiconductor particles, only several nanometres in size, so small that their optical and electronic properties differ from those of larger LED particles. They are a central theme in nanotechnology. Many types of quantum dot will emit light of specific frequencies if electricity or light is applied to them, and these frequencies can be precisely tuned by ...

Quantum cascade lasers (QCLs) are semiconductor lasers that emit in the mid- to far-infrared portion of the electromagnetic spectrum and were first demonstrated by Jerome Faist, Federico Capasso, Deborah Sivco, Carlo Sirtori, Albert Hutchinson, and Alfred Cho at Bell Laboratories in 1994.. Unlike typical interband semiconductor lasers that emit electromagnetic radiation through the ...

Nano Futures launches its 1st anniversary highlights collection To celebrate our first volume, we have gathered a selection of papers published in Nano Futures during its inaugural year to appear in this special commemorative collection. The papers in the collection will be free to read until the end of 2018.

A zigzag-like design for Li-ion batteries is proposed to simultaneously achieve superior foldability up to 180° and high energy density. A foldable battery thus fabricated demonstrates an energy density of 275 Wh L<sup>-1</sup> and is resilient to fatigue over 45 000 dynamic cycles with a folding angle of 130°, while retaining stable electrochemical performance.

1.. Introduction There have been numerous published reviews in recent years on the subject of tunneling time , , , , , , , , . Indeed, this journal published one such review less than 2 years ago . Given the profusion and currency of reviews on the subject, one might question the need for yet another one so soon.

## Tunneling time, the Hartman effect, and superluminality: A
