Sabat, On the theory of quasiconformal mappings in space, Soviet Math. Dokl. 1 (1960), 730-733.  
Zentralblatt MATH: 0119.06503 Mathematical Reviews (MathSciNet): MR130370 25.

### **Gehring : Quasiconformal mappings in space**

PDF | A new lower bound for the conformal capacity of the Grötzsch ring and sharp bounds for the radial distortion of a quasiconformal automorphism of the unit ball are obtained in  $n$ -space,  $n \geq 2$ .

### **(PDF) Inequalities for quasiconformal mappings in space**

1. Introduction: Mercator's map 240 2. History and background 241 3. Preliminaries 242 ACLp functions 242 Conformal mappings 242 Möbius transformations 242 4. Modulus of a path family 244 Ring domains 248 Modulus in conformal mappings 250 Capacity of a condenser 251 Sets of zero capacity 252 Spherical symmetrizations 252 Canonical ring domains 253 Spherical metric 256 5. Quasiconformal mappings 256 Examples 257 6.

### **Introduction to quasiconformal mappings in n-space**

The present volume is the first collection of surveys on Quasiconformal Space Mappings since the origin of the theory in 1960 and this collection provides in compact form access to a wide spectrum of recent results due to well-known specialists.

### **Quasiconformal Mappings and Sobolev Spaces (Mathematics**

If the underlying space  $X$  lacks a useful infinitesimal structure, then we cannot expect any large-scale properties of quasiconformal mappings defined on  $X$ . On the other hand, if the underlying space  $X$  has enough structure, the infinitesimal definition given above in fact guarantees strong properties of quasiconformal mappings.

### **Analytic properties of quasiconformal mappings between**

If  $s = 0$ , this is simply the identity map. A homeomorphism is 1-quasiconformal if and only if it is conformal. Hence the identity map is always 1-quasiconformal. If  $f : D \rightarrow D'$  is  $K$ -quasiconformal and  $g : D' \rightarrow D''$  is  $K'$ -quasiconformal, then  $g \circ f$  is  $KK'$ -quasiconformal. The inverse of a  $K$ -quasiconformal

homeomorphism is  $K$ -quasiconformal. The set of 1-quasiconformal maps forms a group under composition.

### **Quasiconformal mapping - Wikipedia**

2 KARI ASTALA, MARIO BONK, AND JUHA HEINONEN 1. Introduction A quasiconformal mapping that is defined in the upper half space  $\mathbb{R}^{n+1}_+$  of  $\mathbb{R}^{n+1}$  has an almost everywhere defined trace on  $\mathbb{R}^n$  via its radial (angular) limits.

### **QUASICONFORMAL MAPPINGS WITH SOBOLEV - helsinki.fi**

between the dimensions  $n = 2$  and  $n \geq 3$  is that by Riemann's mapping theorem planeconformalmappings constitute a very wide andflexible class, while by Liouville's theorem conformal mappings space  $\mathbb{R}^n$ ,  $n \geq 3$ , coincide with Mobius transformations and are thus very rigid. The basic results of the geometric theory of quasiconformal mappings are given in the well-known books of P. Caraman [Car] and J. Viisilii [V2].

### **Quasiconformal Space Mappings Lecture Notes in Mathematics**

On the degree of closeness of the quasiconformal mappings in the space to the conformal ones (Russian), Dokl.Akad.Nauk SSSR, 1971, 200, 759–761. MathSciNet Google Scholar 6.
