

recent advances in control pdf

Recent developments include the introduction of insect-growth regulators and improved methods of product application. Recent advances in ectoparasite control in companion animals have also been fuelled by the introduction of several novel compounds and the development of convenient "spot-on"™ formulations, as highlighted by Andrew Forbes (Merial Animal Health, Harlow, Essex, UK).

1.1 Introduction 1.1.1 Structural Vibration Control In recent years, structural vibration control of large civil structures has received a great deal of attention [2, 32, 35]. The control strategies in the field of large civil structures might be categorized as, 1. passive damping, 2. active control, 3. semiactive control and, 4. hybrid control.

Recent advances in the pharmacology of pain have unravelled some of the mediators of chronic pain, and they offer potential targets for treatments that are currently being developed (box 2). New investigative techniques are also being developed for improved detection of factors maintaining chronic pain.
