The International Workshop on Recent Advances in Stochastic Operations Research (2005 RASOR Canmore) was held in Canmore, Alberta, Canada, on August 25-26, 2005. Based on the 40 papers presented, participants exchanged ideas, discussed common problems, and found new ideas and problems during the conference.

This volume presents the most recent applied and methodological issues in stochastic modeling and data analysis. The contributions cover various fields such as stochastic processes and applications, data analysis methods and techniques, Bayesian methods, biostatistics, econometrics, sampling, linear and nonlinear models, networks and queues, survival analysis, and time series.

Stochastic is a term coming from the ancient Greek period and is related to “stochastes” (people who are philosophers or intellectuals, scientists in recent notation) and “stochazomai” (I am involved in highly theoretical and intellectual issues as are philosophy and science).

Abstract: Whereas semiclassical gravity is based on the semiclassical Einstein equation with sources given by the expectation value of the stress-energy tensor of quantum fields, stochastic semiclassical gravity is based on the Einstein- Langevin equation, which has in addition sources due to the noise kernel. The noise kernel is the expectation value of the stress-energy bi-tensor which ...
