(PDF) Recreation Ecology: The impact of hikers on wildlife

Recreation ecology is the scientific study of environmental impacts resulting from recreational activity in protected natural areas. This field of study includes research and monitoring assessments of biophysical changes, analyses to identify causal and influential factors or support carrying capacity planning and management, and investigations of the efficacy of educational, regulatory, and site management actions designed to minimize recreation impacts.

Recreation ecology - Wikipedia

Book : Recreation ecology: the ecological impact of outdoor recreation and ecotourism. 1997 pp.xxi + 639 pp. ref.46 pp. of Abstract : A comprehensive and systematic review of the ecological impacts on terrestrial, aquatic and marine habitats caused by outdoor recreation and ecotourism is presented.

Recreation ecology - Revolv

SUMMARY: Recreation such as hiking, jogging, horseback riding, and photography can cause negative ecological impacts to ecosystems, plants and wildlife including trampling, soil compaction, erosion, disturbance (due to noise & motion), pollution,

ECOLOGICAL IMPACTS OF RECREATIONAL USE OF TRAILS

Recreation ecology "the study of the environmental consequences of outdoor recreation/nature-based tourism activities and their effective management" is an emerging field of global importance. A primary research generalization in this field, the use"impact relationship, is commonly described as curvilinear, with proportionally more impact from initial recreation/tourism use.
