Recursion theory and countable Borel equivalence relations by Andrew Scott Marks Doctor of Philosophy in Mathematics University of California, Berkeley Professor Theodore Allen Slaman, Chair We investigate the question of what equivalence relations from recursion theory are uni-versal countable Borel equivalence relations.

Recursion Theory That part of mathematical logic which is focused on deï-nability, especially for subsets of the natural numbers (!) and of ... any countable model of recursive comprehension (RCA0) can be extended to a model of WKLO by adding reals. Consequently, every 51 1 consequence of WKLO follows from RCA0. 18. Subsets of ! 11 1 51 1

â€¢ In programming recursion is a method call to the same method. In other words, a recursive method is one that calls itself. â€¢ Why write a method that calls itself? â€¢ Recursion is a good problem solving approach â€¢ solve a problem by reducing the problem to smaller subproblems; this results in recursive calls.

recursive (total) function  $f$  such that  $x \in B \iff f(x) \in A$ . An r.e. set  $A$  is creative if there is a unary recursive partial function  $u(e)$  such that  $\forall e \in \mathbb{N} \dots \iff u(e) \in A \iff u(e) \in W_e$ . (3) The notion goes back to Post (1944) who showed (in effect) that every r.e.-complete set is creative and implicitly asked for the converse.

Countable recursion is the theory of recursion on the associates. Gandy and Hyland [3] and Hyland [7] are good sources for the recent development of countable recursion. This paper will mostly be concerned with Kleene-recursion on the countable functionals as denned in Kleene [8] and [9].

My goal is to write a script to recursively search through the current working directory and the sub directories and print out a count of the number of ordinary files, a count of the directories, count of block special files, count of character special files, count of FIFOs, and a count of symbolic links.
