His work on the blowfly, together with that by his many students and co-workers, still provides the most completely described mechanism of insect feeding. The citation of his work in almost every chapter in this book illustrates the importance of his findings and ideas to our current understanding of regulation of insect feeding.

Compared with other insects, they are fairly closely related to flies, and therefore gene homologs may be readily obtained. Finally, there is a reasonable knowledge of Lepidopteran embryology (Nagy et al., 1994). We were also drawn to butterflies out of interest in the development and evolution of appendages, especially insect wings.

This book is dedicated to the late Vincent G. Dethier. As a pioneer in studying the physiological basis of animal behavior, he focused on regulation of feeding in flies and caterpillars. His work on the blowfly, together with that by his many students and co-workers, still provides the most completely described mechanism of insect feeding.

Regulatory Mechanisms in Insect Feeding | Reg F. Chapman

The number of behavioral components involved in the total feeding behavior of an insect depends upon its temporal and spatial relationships with its food. It is well known that the locomotor behavior of a number of insects changes according to their state of deprivation in ways that enhance the deprived insect's chances of making contact with food.

mechanisms, along with their interactions and regulation, that lead to the development of insecticide resistance and discuss the potential impact of a better understanding of resistance mechanisms on the basic and practical aspects of research into how mosquitoes and house flies develop a resistance to insecticides. 2.

a larger insect, which enables us to collect large amounts of hemolymph and to perform biochemical studies. Recently, our group determined the activation and regulation mechanisms of *Tenebrio* Toll signaling cascade by approaching biochemical methods using a large beetle, *Tenebrio molitor* (Kim et al., 2008; Jiang et al., 2009; Roh et al., 2009).
