for a fixed level of delay p , fitness a decreases as the variances σ^2 increase; (iii) as the delay p increases toward 1, the quantities u_3 and U_4 decrease to zero, whereas the

Delayed reproduction and fitness in variable environments

133 case, independent of the original rate of asexual reproduction, all individuals reproduced 134 asexually ($c=1$) until mutation introduced a third S-allele. Then, c was reset to its original 135 value. 136 Individual fitness, f , was determined by the viability locus, which had two alleles A and a.

Genetic diversity and fitness in small populations of

A genotype's fitness depends on the environment in which the organism lives. The fittest genotype during an ice age, for example, is probably not the fittest genotype once the ice age is over. Fitness is a handy concept because it lumps everything that matters to natural selection (survival, mate-finding, reproduction) into one idea.

What about fitness? - Understanding Evolution

Sexual reproduction requires a male and a female of the same species to copulate and combine their genes in order to produce a new individual who is genetically different from his parents .
