parametrize the robot's configuration space. Often the coordinates of choice are the joint variables, and the configuration space can be parametrized either explicitly or implicitly in terms of these joint variables. Also, to grasp and manipulate objects, a robot is typically equipped with an end-effector, e.g., a mechanical hand or gripper.

Basic Concepts in Robotics Industrial robots are beginning now to revolutionize industry. These robots do not look or behave like human beings, but they do the work of humans. Robots are particularly useful in a wide variety of industrial applications, such as material handling, painting, welding, inspection, and assembly.
