of automatic safety systems. It combines well-established safety design principles with the special techniques required when using programmable devices such as transmitters and PLCs in safety related applications. Regulating authorities do not consider safety shutdown systems to be acceptable unless they have suitable

Integration of safety and control functions have led to the emergence of a number of integrated control and safety system models. In its 2013 "Process Safety Systems Global Market Research Study," ARC identifies 4 levels of control/safety integration: separate, interfaced, integrated but separate, and common.
