Computational science (also scientific computing or scientific computation (SC)) is a rapidly growing multidisciplinary field that uses advanced computing capabilities to understand and solve complex problems. It is an area of science which spans many disciplines, but at its core it involves the development of models and simulations to understand natural systems.

GAMM-IMACS International Symposium on Scientific Computing

In mathematics, a subpaving is a set of nonoverlapping boxes of \mathbb{R}^n . A subset X of \mathbb{R}^n can be approximated by two subpavings X^{\wedge} and X^+ such that $X^{\wedge} \subseteq X \subseteq X^+$. The three figures on the right show an approximation of the set $X = \{(x_1, x_2) \in \mathbb{R}^2 \mid x_1^2 + x_2^2 + \sin(x_1 + x_2) \in [4,9]\}$ with different accuracies. The set X^{\wedge} corresponds to red boxes and the set X^+ contains all red ...

Verification And Validation In Scientific Computing

Scientific computing methods are discussed for areas of applied mathematics such as numerical linear algebra, nonlinear equations, global optimization, ordinary and partial differential equations and dynamical systems.

Scientific Computing and Validated Numerics: Proceedings

Validity encompasses the entire experimental concept and establishes whether the results obtained meet all of the requirements of the scientific research method. For example, there must have been randomization of the sample groups and appropriate care and diligence shown in the allocation of controls .
