Selenium is a metalloid that has an atomic number of 34, an atomic weight of 78.96, four natural oxidation states ( $-2$ , 0, +4 and +6) and many different chemical forms in nature. Selenium occurs in the earth's crust most commonly as selenite, selenate and selenides associated with sulfide minerals (NRC, 1983).

In July, 1988, more than 300 scientists from 29 different countries gathered at Tiibingen, W. Germany, in order to spend 4 days discussing their favourite trace element, selenium. This meeting continued the good tradition of three previous meetings held in Corvallis/Oregon, 1976, in Lubbock/Texas, 1980, and in Beijing/China, in 1984.

Selenium usually exerts its influence on physiology as an integral component of proteins, into which it is incorporated in the form of selenocysteine (Cone et al., 1976; see below). Selenoproteins can be selectively labeled by  $^{75}\text{Se}$  in selenium-deficient animals and autoradiographically visualized after electrophoretic separation (Behne et al ...

Selenium deficiency is rare in healthy individuals but can be seen in conditions with impaired intestinal function. Keshan disease, a potentially fatal cardiomyopathy with myocardial necrosis results from a combination of selenium deficiency from poor dietary intake and secondary viral infection (often coxsackie virus).
