

semi infinite programming reprint pdf

Semi-infinite programming (briefly: SIP) is an thrilling part of mathematical programming. SIP points embrace finitely many variables and, in distinction to finite optimization points, infinitely many inequality constraints.

Semi-infinite optimization is a vivid field of active research. Recently semi- infinite optimization in a general form has attracted a lot of attention, not only because of its surprising structural aspects, but also due to the large number of applications which can be formulated as general semi-infinite programs.

Bi-Level Strategies in Semi-Infinite Programming Softcover

This tutorial presents an introduction to generalized semi-infinite programming (GSIP) which in recent years became a vivid field of active research in mathematical programming.

Generalized semi-infinite programming: A tutorial

In this paper we describe an exact penalty function for semi-infinite programming. This function is a generalisation of the d- exact penalty function for nonlinear programming (see, e.g. Corm and Pietrzykowski (1977)) and may be used as a merit function for semi-infinite programming methods.

An exact penalty function for semi-infinite programming

of subtests), can be formulated as a semi-infinite linear program (Fletcher (1981)). (4) The standard convex program can be formulated as a semi-infinite linear program (Dantzig (1963), Chapter 24). The focus of this dissertation is on formulating and solving semi-infinite programming problems.

Semi-Infinite Programming

A semi-infinite programming (SIP) problem is an optimization problem where finitely many variables appear in infinitely many constraints.
