Vehicular communication systems are networks in which vehicles and roadside units are the communicating nodes, providing each other with information, such as safety warnings and traffic information. They can be effective in avoiding accidents and traffic congestion. Both types of nodes are dedicated short-range communications (DSRC) devices. DSRC works in 5.9 GHz band with bandwidth of 75 MHz ...

View all technologies available for licensing Collaboration Opportunities. Collaborations with industry and small businesses support the Labs' primary missions and help companies bring exciting technologies to the marketplace as new and improved products.

MicroElectroMechanical Systems (MEMS)

ST offers the widest range of MEMS and sensors covering a full spectrum of applications from low-power devices for IoT and battery-operated applications to high-end devices for accurate navigation and positioning, Industry 4.0, augmented virtual reality components and smartphones.. For Industry 4.0, ST provides a complete range of products suitable to be applied in early failure detection and ...

MEMS and Sensors - STMicroelectronics

Wireless communication, or sometimes simply wireless, is the transfer of information or power between two or more points that are not connected by an electrical conductor. The most common wireless technologies use radio waves. With radio waves distances can be short, such as a few meters for Bluetooth or as far as millions of kilometers for deep-space radio communications.
