Lectures on Serre's conjectures - William Stein's Homepage

Introduction to Serre's conjecture. Bas Edixhoven September 23, 2005 Abstract The conjecture will be stated, and put in its historical context and in the wider context of the Langlands program. Serre's level and weight of a 2-dimensional mod p Galois representation will be defined. Khare's result will be stated.

Introduction to Serre's conjecture. - Universiteit Leiden

In mathematics, Serre's modularity conjecture, introduced by Jean-Pierre Serre (1975, 1987), states that an odd, irreducible, two-dimensional Galois representation over a finite field arises from a modular form. A stronger version of this conjecture specifies the weight and level of the modular form.

Annals of Mathematics, 169 (2009), 229–253 On Serre's conjecture for 2-dimensional mod p representations of $\text{Gal}(\mathbb{Q} = \mathbb{Q})$ By Chandrashekhara Khare* and Jean-Pierre Wintenberger

On Serre's conjecture for 2-dimensional mod p

Abstract. ρ is any Frobenius element corresponding to any prime ideal of \mathbb{Z} lying over p . Let $\rho|_2$ denote the restriction to \mathbb{Q} of complex conjugation.

Thanks to Madhulika for her support in things great and small. I would like to add that this article contains no original material or ...

Serre's Conjecture on 2-dimensional Galois

I offered a course on Serre's Conjecture to a small group of graduate students in January, 1977 [at the University of California, Berkeley] one year after its solution by Quillen and Suslin. My course was taught very much in the spirit of a mathematical 'guided tour'.

a key part of Serre's conjecture. We use Serre and Swinnerton-Dyer's original approach to define mod p modular forms, this is detailed in [SD73, Ser73a, Ser73b]. This approach is a simple one and it allows us to talk about 2. congruences involving q -expansions and their coefficients without getting

Using discriminant bounds, Tate proved the conjecture for mod 2 representations. Later, Serre proved the conjecture for $p = 3$ in a similar manner. In 1999, S. Brueggeman treated the case $p = 5$ modulo the generalized Riemann hypothesis.
