The theory of functions of several complex variables is the branch of mathematics dealing with complex valued functions (z_1, \dots, z_n) on the space \mathbb{C}^n of n -tuples of complex numbers. As in complex analysis, which is the case $n = 1$ but of a distinct character, these are not just any functions: they are supposed to be holomorphic or complex analytic, so that locally speaking they are power series in ...

Several complex variables - Wikipedia

theory of several complex variables are the features that differ from the one-dimensional theory. The one-dimensional theory is illuminated by several complementary points of view: power series, integral representations, partial differential equations, and geometry.

The subject of this book is Complex Analysis in Several Variables. This text begins at an elementary level with standard local results, followed by a thorough discussion of the various fundamental concepts of "complex convexity" related to the remarkable extension properties of holomorphic functions in more than one variable.
