A CATEGORICAL INTRODUCTION TO SHEAVES DAPING WENG Abstract. Sheaf is a very useful notion when defining and computing many different cohomology theories over topological spaces. There are several ways to build up sheaf theory with different axioms; however, some of the axioms are a little bit hard to remember.

A CATEGORICAL INTRODUCTION TO SHEAVES

It is the aim of this article to give a reasonably detailed account of a specific bundle of geometric investigations and results pertaining to arithmetic groups, the geometry of the corresponding locally symmetric space $X/\hat{\Gamma}$ attached to a given arithmetic subgroup $\hat{\Gamma} \triangleleft \check{S}$, G of a reductive algebraic group G and its cohomology groups $H^i(\hat{X}/\hat{\Gamma}, C)$.

Among the many innovations in this book, the concept of the "tautness" of a subspace is introduced and exploited; the fact that sheaf theoretic cohomology satisfies the homotopy property is proved for general topological spaces; and relative cohomology is introduced into sheaf theory.

1950 The "second edition" sheaf theory from the Cartan seminar: the sheaf space (espace $\tilde{\text{étalé}}$) definition is used, with stalkwise structure. Supports are introduced, and cohomology with supports. Continuous mappings give rise to spectral sequences.

Primarily concerned with the study of cohomology theories of general topological spaces with "general coefficient systems", the parts of sheaf theory covered here are those areas important to algebraic topology.
