

### **signaling in the heart pdf**

Signal transduction pathways are at the core of most biological processes and are critical regulators of heart physiology and pathophysiology. The heart is both a transmitter and dynamic receptor of a variety of intracellular and extracellular stimuli, playing a critical role of an integrator of diverse signaling mechanisms.

signal independent of RBPJ<sup>o</sup>, referred to as noncanonical Notch signaling. In this thesis, I aimed to investigate noncanonical Notch signaling during early heart development. To do this, I deleted RBPJ<sup>o</sup> and conditionally overexpressed Notch in mouse embryos using the cre-lox system and analyzed the developing embryos.
