Static or quasi-static analysis means the load is applied slowly so that the structure deforms very slowly (strain rate also in a low range) which means that the inertia force is very small, thus negligible.

### **What is the difference between static and dynamic analysis**

Chapter 1 Static Force Analysis When the inertia forces are neglected in comparison to the externally applied load, one may go for static force analysis. If the body is under equilibrium condition, then this equilibrium is

known as static

Managed SAST, our SAST cloud-based managed service, enables you to implement and scale static analysis quickly and economically. By offering this service through our Customer Assessment Centers, we can provide a level of quality that is typically associated with consultancies, but at a much lower cost.

Static program analysis is the analysis of computer software that is performed without actually executing programs, in contrast with dynamic analysis, which is analysis performed on programs while they are executing.
