Fundamentals of Small Unmanned Aircraft Flight

Flight dynamics characterizes the motion of a flight vehicle in the atmosphere. As such, it can be considered a branch of systems dynamics in which the system studies is a flight vehicle.

Introduction to Aircraft Stability and Control Course

Steady flight, unaccelerated flight, or equilibrium flight is a special case in flight dynamics where the aircraft's linear and angular velocity are constant in a body-fixed reference frame. Basic aircraft maneuvers such as level flight, climbs and descents, and coordinated turns can be modeled as steady flight maneuvers. [2]

IV. Aircraft Performance In this lecture we will make the connections between aircraft performance and propulsion system performance. For a vehicle in steady, level flight, the thrust force is equal to the drag force, and lift is equal to weight.
