Cell Culture Cell culture is one of the major tools used in cellular and molecular biology, providing excellent model systems for studying the normal physiology and biochemistry of cells (e.g., metabolic studies, aging), the effects of drugs and toxic compounds on the cells, and mutagenesis and carcinogenesis.

viability counts, tetrazolium-based cell-proliferation assays, measuring the incorporation of BrdU during DNA synthesis, and by morphological studies using light and electron microscopes. In pre-liminary experiments, the persistence of viable stages for a few days was ascertained in both medium 199 (M199) and in seawater.

Over the past decade, numerous studies have shown that circulating tumor cell (CTC) 4 counts have prognostic value in various tumor entities (1, 2). Most studies have dealt with the most frequent epithelial tumors such as breast, prostate, or lung cancer; these tumor types are also the focus of this review.
