In this study, size and surface effects on temperature and frequency dependent magnetic properties of superparamagnetic Fe<sub>3</sub>O<sub>4</sub> nanoparticles in a size range of 1.1-11 nm are investigated by SPR ...

Surface magnetic properties of a semi-infinite Ising model with a spin-1 free surface coupled ferromagnetically (or antiferromagnetically) to the bulk are investigated by the use of the effective ...

### **(PDF) Surface Magnetic Effects in an Alternating Superlattice**

Abstract: Due to finite size effects, such as the high surface-to-volume ratio and different crystal structures, magnetic nanoparticles are found to exhibit interesting and considerably different magnetic properties than those found in their corresponding bulk materials.

size effects of the magnetic core, related to the reduced number of spins cooperatively linked within the particle, and to surface and interface effects, related to the lack of coordination for the surface ions, inducing broken exchange bonds which can result in frustration and spin disorder.

nanoparticles. The physical origin of magnetic surface anisotropy is described, along with its effect on the magnetic spin configuration and energy landscape. Importantly, it is shown that a cubic anisotropic surface can be induced, which leads to a complex energy landscape with a non-trivial size dependence.

attributed to finite-size or surface effects. Nonetheless, ferro-magnetic resonance (FMR), which is a well known and very precise technique for characterizing bulk and layered magnetic media [79], benefits from a renewed interest in the context of nanomagnetism. Indeed, some newly devised variants of
