### **A computational study of a backward swimming hydrodynamics**

Simultaneous swimming kinematics and hydrodynamics are presented for American eels, *Anguilla rostrata*, swimming at speeds from  $0.5$  to  $2 \text{ L s}^{-1}$ . Body outlines and particle image velocimetry (PIV) data were collected using two synchronized high-speed cameras, and an empirical relationship between swimming motions and fluid flow is described.

### **The hydrodynamics of eel swimming II. Effect of swimming**

Eels undulate a larger portion of their bodies while swimming than many other fishes, but the hydrodynamic consequences of this swimming mode are poorly understood. In this study, we examine in detail the hydrodynamics of American eels (*Anguilla rostrata*) swimming steadily at  $1.4 \text{ BL s}^{-1}$  and compare them with previous results from other fishes.

We compared the kinematics (wave speed, cycle frequency, amplitude, local bending and estimated muscle strain) of forward and backward swimming in the European eel *Anguilla anguilla*. Both swimming modes are

characterised by a wave of undulation that travels over the body in the direction opposite to that of swimming.
