TEM studies of tempered structural steels with Ni 2. Experimental procedure In this investigation the authors used four model alloys of constant concentration of C (about 0.30%) and the variable concentration of Ni (0.35 4.00%). The concentration of other elements was kept constant. Table 1 presents the chemical compositions of tested alloys.

(Political Studies Review) Tempered Strength provides us with both a theoretical guide to the role of prudential leadership in the history of political philosophy, as well as practical guidance with regard to the exercise of such leadership (or at times, its lack) from ancient times to the present.
