

the adria microplate gps pdf

Tectonic motion of the Adria microplate exerts a first-order control on the tectonics, geology, seismology, resource distribution, and the geological hazards across a broad zone of south-central Europe and the north-central Mediterranean.

The Adria Microplate: GPS Geodesy, Tectonics and Hazards

Tectonic movement of the Adria microplate exerts a first-order regulate at the tectonics, geology, seismology, source distribution, and the geological risks throughout a large sector of south-central Europe and the north-central Mediterranean. on account that its first software to geodynamical difficulties, GPS geodesy has steadily published ...

We analyzed the data from a group of permanent GNSS sites on the N-Adria microplate, where anomalous

southward tilting and low-frequency tremors preceded the 1976 $M_w = 6.4$ earthquake. We present records from different stations of a transient signal with an approximately 2-year period that propagated through the northern edge of Adria, in a region 150 km wide.

The Adria Microplate: GPS Geodesy, Tectonics and Hazards

Our results show that independent microplate models of Adria offer a better fit to GPS velocities than models considering Adria as continuous with the Nubia or Eurasia plate. Geodetic data alone cannot discriminate between a single block (AP) or a two block (GDAP) description of Adria (Figure 23.2), but the GDAP model predicts boundary slip ...

We studied the motion of the Adriatic microplate using Eurasian-referenced GPS-derived velocities from Istria Peninsula (Slovenia, Croatia) and Po Plain (Italy) sites and earthquake slip vectors around its edges from a Regional Centroid Moment Tensor catalogue.

The Idrija Fault (pronounced ; Slovene: Idrijski prelom) is a seismically active fault in Slovenia. It strikes NW–SE and the fault plane dips towards the northeast. The activity along the fault started in the Miocene with normal faulting and changed to dextral strike-slip in Pliocene.
