have an algebraic characterization of rational functions, we need a notion similar to the one of minimal automata for transductions. For the class of functions defined by deterministic transducers, such a notion exists [Cho03] and this minimal transducer 1.

### **Towards an algebraic characterization of rational word**

The study of graph vertex colorability from an algebraic perspective has introduced novel techniques and algorithms into the field. For instance, it is known that  $k$ -colorability of a graph  $G$  is equivalent to the condition  $1 \in I_G$ ,  $k$  for a certain ideal  $I_G$ ,  $k \in \{1, \dots, n\}$ .

2.3 An algebraic Pursell-Shanks type result We aspire to give an algebraic proof of the theorem stating that two manifolds  $M_1$  and  $M_2$  are diffeomorphic if the Lie algebras  $D(M_1)$  and  $D(M_2)$  are isomorphic. So let us consider a Lie algebra isomorphism  $\hat{\psi} : D_1 \rightarrow D_2$  between two quantum Poisson algebras  $D_1$  and  $D_2$ .

3. Algebraic characterization of  $A$ -stability. A minimal method is  $A$ -stable if and only if there exists a symmetric positive definite matrix  $R$  satisfying (3.1)  $Re = b$  and  $RC + CrR > O$ . A method is  $A$ -stable, if a symmetric positive semidefinite  $R$  satisfies (3.1) (see [9]).

A finer characterization is possible in the framework of our paper, due to the linearity of the vector fields and the fact that the Lyapunov function is assumed to be quadratic. The main novelty of our approach is that we require no dwell time conditions on the switching laws.

An algebraic characterization of unary two-way transducers? (Extended Abstract) Christian Cholut and Bruno Guillon 1 LIAFA, CNRS and Université Paris 7 Denis Diderot, France. Abstract. Two-way transducers are ordinary finite two-way automata that are provided with a one-way write-only tape. They perform a word to word transformation.

Towards an Algebraic Characterization of 3-dimensional Cobordisms Thomas Kerler April 2001 (To appear in Contemp. Math.) Abstract : The goal of this paper is to find a close to isomorphic presentation of 3-manifolds in terms of Hopf algebraic expressions. To this end we define and compare three different braided tensor categories that
