The forebrain is split into 2 sections: The telencephalon and the diencephalon. Parts of the telencephalon. Cerebral cortex â€“ The cerebral cortex is the â€œgray matterâ€• of your brain, and is comprised of the fissures (valleys) and gyri (hills). Most information processing occurs in the cerebral cortex.

decreases were seen in forebrain and cortical gray matter between untreated and fully treated/recovered patients as these structures trended towards control levels after sequential treatment.

The current study reinforced previous findings of increased forebrain parenchymal, cortical gray matter and pallidum volumes, as well as decreased caudate nucleus volumes in untreated CIRS patients compared to controls. All changes were found bilaterally.

volumetric MCI studies, the basal forebrain area (BFA) is another region of potential interest as it is a major source of cholinergic projections to the hippocampus and the cerebral cortex.<sup>11</sup> The cytoarchitecture of the BFA is complex. Based on the target area of its cholinergic projections, the BFA can be subdivided into four cell groups termed Ch1 to Ch4.

The basal forebrain area (BFA) is closely connected to the hippocampus by virtue of cholinergic neuronal projections. Structural neuroimaging studies have shown reduced volumes of both structures in Alzheimer's disease and its prodromal stage mild cognitive impairment (MCI), but generally not in the same investigation.

The forebrain (proencephalon) is the largest part of the brain, most of which is cerebrum. Other important structures found in the forebrain include the thalamus , the hypothalamus and the limbic system .

The cerebrum consists of the cerebral cortex, underlying white matter, and the basal ganglia. By 5 weeks in utero, it is visible as a single portion toward the front of the fetus. At 8 weeks in utero, the forebrain splits into the left and right cerebral hemispheres.

Well, both of these tissue types are part of the cerebrum; gray matter is cortex tissue (outer tissue), while white matter is deep tissue (inner tissue) below gray matter.
