Geology is a multi-disciplinary field with an array of subjects to study. The Geology Department at San Jose State University studies the intricacies of our earth and how geologic and human-driven processes shape it; our faculty research interests range from earthquakes to volcanoes and from mountain formation to science education and outreach.

The geology of Mars is the scientific study of the surface, crust, and interior of the planet Mars. It emphasizes the composition, structure, history, and physical processes that shape the planet. It is analogous to the field of terrestrial geology. In planetary science, the term geology is used in its broadest sense to mean the study of the solid parts of planets and moons.

Structural geology is the study of the three-dimensional distribution of rock units with respect to their deformational histories. The primary goal of structural geology is to use measurements of present-day rock geometries to uncover information about the history of deformation in the rocks, and ultimately, to understand the stress field that resulted in the observed strain and geometries.
