The Law of Cause and Effect, or Law/Principle of Causality, has been investigated and recognized for millennia. In *Phaedo*, written by Plato in 360 B.C., an "investigation of nature" is spoken of concerning causality, wherein "the causes of everything, why each thing comes into being and why it perishes and why it exists" are discussed (Plato, 1966, 1:96a-b, emp. added).

Causality and Non-contradiction If we say that "every effect must have a cause, what is an EFFECT? An effect, by definition, is something that has been caused. So, the Law of Causality is simply a mental extension of the Law of Non-Contradiction. Because something can't be an effect and a non-effect at the same time and in the

As regards attributive uses of cause, the fact that the law has to attend simultaneously both to the meaning of terms importing causal criteria and to the purpose of legal rules and their moral status makes the theory of causation a terrain of debate which does not at present command general agreement and is likely to remain controversial (e.g. Stapleton, Wright, Moore, Gardner, Honoré).

Causality should not be confused with Newton's second law, which is related to the conservation of momentum, and is a consequence of the spatial homogeneity of physical laws. The name causality suggests that all effects must have specific causes, which is a concept unrelated to the common use of causality in physics, and is violated in some mainstream interpretations of quantum mechanics.
