### **7-1 Chapter 7- Memory System Design Chapter 7- Memory**

Architecture and components of Computer System Memory Classification IFE Course In Computer Architecture Slide 1 With respect to the way of data access we can classify memories as: - random access memories (RAM), - sequentially accessible memory (SAM), - direct access memory (DAM), - contents addressable memory (CAM).

### **Architecture and components of Computer System Memory**

¢ Good choice for presenting the user with a BIG memory system ° SRAM is fast but expensive and not very dense: ¢ Good choice for providing the user FAST access time.

### **CPS101 Computer Organization and Programming Lecture 13**

memory can serve as very fast and convenient FIFO storage. f FormoreinformationregardingFIFObuffers,refertothe On-ChipFIFOMemoryCore chapter in Volume 5: Embedded Peripherals of the Quartus II Handbook .

### **Memory System Design - intel.com**

A memory hierarchy is designed to provide mul-2 division of labor make possible all of these competing roughly 1/100,000,000 pennies per bit of storage.

### **OVERVIEW On Memory Systems and Their Design**

The Memory Hierarchy To this point in our study of systems, we have relied on a simple model of a computer system as a CPU that executes instructions and a memory system that holds instructions and data for the CPU.

### **The Memory Hierarchy - Carnegie Mellon University**

The Theatre Memory System of Robert Fludd 320 XVI. Fludd's Memory Theatre and the Globe Theatre 342 XVII. The Art of Memory and the Growth of Scienti-fic Method 368 ... write the history of the art of memory

from Simonides onwards. This stage was reflected in an article on 'The Ciceronian Art of

### **The Art of Memory - AlzhUp**

memory controller for a read request, and vice versa for a write. The memory channel typically operates at a frequency slower than the processor – modern channels are typically 800 MHz or 1066 MHz. The memory system also follows the DDR (Double Data Rate) standard, which uses both the rising and falling clock edges to carry signals, i.e., a channel wire carries two bits per cycle.

### **Lecture Notes: Memory Systems**

Auditory system - echoic memory Visual system - iconic memory . Working Memory Limited capacity, temporary storage system. Variable but limited duration system (from ~30 seconds to a few minutes). Effectiveness decreases with ageing. Capacity is approximately  $7 \pm 2$  "chunks". A "chunk" is an item of information.

### **Human Information Processing - II**

Short-term and Long-term Memory – Short-term memory: your mind stores information for a few seconds or a few minutes. This memory is fleeting – typically enough time to dial a phone number or write down an instructor's thought. Your brain holds an average of seven items in short term memory.
