This will follow from following variant of the Mountain-Pass Theorem first proved by Pucci and Serrin in 1985, [14]. Theorem 5.1 ([14, Theorem 1]). Theorem 5.1 ([14, Theorem 1]).

The Structure of the Critical Set in the Mountain Pass Theorem

The mountain pass theorem is an existence theorem from the calculus of variations. Given certain conditions on a function, the theorem demonstrates the existence of a saddle point. The theorem is unusual in that there are many other theorems regarding the existence of extrema, but few regarding saddle points.

2. Mountain pass theorem for C^2 -functionals The mountain pass theorem is true for C^1 functionals. We commence with case of C^2 -functionals on a Hilbert space. In this case the proof of the mountain pass theorem is relatively easy and allows to understand difficulties that we encounter in case of C^1 -functionals.

INTRODUCTION TO THE THEORY OF CRITICAL POINTS THE MOUNTAIN

Theorem 1.3 is due to Ambrosetti and the author [5]. Note that if $E \subset \mathbb{R}^3$, we can interpret (1.1)–(1.2) as saying that the origin lies in a valley surrounded by a mountain range and (1.4) tells us that the lowest pass through the range contains a critical point. Note that I need not be bounded from above as in (1.2).
