Anticancer Research. Anticancer Research is an international print and online monthly journal designed to rapidly publish peer-reviewed original papers and reviews on experimental and clinical cancer research.

iiar-anticancer.org | Founded in 1995

Breast cancer is cancer that develops from breast tissue. Signs of breast cancer may include a lump in the breast, a change in breast shape, dimpling of the skin, fluid coming from the nipple, a newly inverted nipple, or a red or scaly patch of skin. In those with distant spread of the disease, there may be bone pain, swollen lymph nodes, shortness of breath, or yellow skin.

When pH drops to 6 or below, rapid fusion between the membranes of viruses and the liposomes occurs.

This results in the transfer of viral nucleocapsids into the liposomes. Ebola virions are taken into endothelial cells via macropinocytosis.

Advances in understanding tumor biology, particularly signaling pathways, have led to the development and approval of many novel agents and have changed the landscape of therapy for patients with metastatic breast cancer.

Changing Treatment Paradigms in Metastatic Breast Cancer

Risk factors for developing CLL/SLL. The causes (etiology) of CLL and lymphomas are not yet known. There could be many contributing factors that lead to its development over time, such as advancing age, inherited disposition, exposures to chemicals or radiation, and chance.

Arginase catalyzes the hydrolysis of arginine to ornithine and urea. At least two isoforms of mammalian arginase exist (types I and II) which differ in their tissue distribution, subcellular localization, immunologic crossreactivity and physiologic function.

Arginase 1/ARG1/liver Arginase Antibody (NB100-59740)

Hyaluronic acid (HA; conjugate base hyaluronate), also called hyaluronan, is an anionic, nonsulfated glycosaminoglycan distributed widely throughout connective, epithelial, and neural tissues. It is unique among glycosaminoglycans in that it is nonsulfated, forms in the plasma membrane instead of the Golgi apparatus, and can be very large: human synovial HA averages about 7 million Da per ...

ASCO's growing roster of cutting-edge journals serves readers as the most credible, authoritative, peer-reviewed resources for significant clinical oncology research and research that informs the delivery of efficient, high-quality cancer care across the globe.

Early Research Suggests First Immunotherapy for - ASCO

In the 1980s the importance of HER2 signalling to the aberrant behaviour of a subset of breast cancer cells was recognized for the first time and, consequently, a hitherto unknown subtype of breast cancer – HER2-positive (HER2+) breast cancer was identified.

Treatment of advanced HER2-positive breast cancer: 2018

1. Introduction. Astrocytes are active dynamic signalling players of the central nervous system (CNS). Over the past 25 years it has become clear that astrocytes participate to a variety of essential physiological processes in the healthy brain.

Human astrocytes in the diseased brain - ScienceDirect

Fracture healing in a broken bone is quite a complex process that begins by hematoma formation, a collection of inflammatory agents which render the bone forming cells to form bone tissue to bridge the defect created by fracture.
