known in thermodynamic modeling and thermophysical properties for cryogenic fluids. There are two directions that develop this problem, which differ in how to obtain relations connecting the thermodynamic parameters of state. The first category is represented by models based on thermodynamic equations of state.

2.1 Thermophysical properties The simplest way of cooling equipment with a cryogenic fluid is to make use of its latent heat of vaporization, e.g. by immersion in a bath of boiling liquid. As a consequence, the useful temperature range of cryogenic fluids is that in which there exists latent heat of vaporization, i.e. between the triple
