Types of frequency. The cumulative frequency is the total of the absolute frequencies of all events at or below a certain point in an ordered list of events.: 17â€“19 The relative frequency (or empirical probability) of an event is the absolute frequency normalized by the total number of events: $= \frac{\text{absolute frequency}}{\text{total number of events}}$. The values of for all events can be plotted to produce a frequency distribution.

Relative species abundance is a component of biodiversity and refers to how common or rare a species is relative to other species in a defined location or community. Relative abundance is the percent composition of an organism of a particular kind relative to the total number of organisms in the area. Relative species abundances tend to conform to specific patterns that are among the best ...
