Application Challenges for Ubiquitous Knowledge Discovery

Ubiquitous computing bears the promise of stimulating a similar leap forward. Small devices can now be installed in many places, mobile and wearable devices enable registration of large amounts of information, thus generating a wide range of new types of data for which new learning and discovery methods are needed, far beyond existing ones.

Introduction: The Challenge of Ubiquitous Knowledge

In this paper we present a data stream mining scenario with several key aspects that are shared across many data mining settings of societal importance, e.g. the examples mentioned earlier and ...
