Photography is the art, application and practice of creating durable images by recording light or other electromagnetic radiation, either electronically by means of an image sensor, or chemically by means of a light-sensitive material such as photographic film. It is employed in many fields of science, manufacturing (e.g., photolithography), and business, as well as its more direct uses for art ...

Dynamic range, abbreviated DR, DNR, or DYR is the ratio between the largest and smallest values that a certain quantity can assume. It is often used in the context of signals, like sound and light. It is measured either as a ratio or as a base-10 or base-2 (doublings, bits or stops) logarithmic value of the difference between the smallest and largest signal values.

### **Dynamic range - Wikipedia**

Understanding Color & Light. Light is the single basic ingredient required to create photographs. Without light, pictures don't exist. Digital photography is the process of transferring light energy, carried by photons, into digital information, which can be processed and displayed by computers and cameras in the form of digital images.

- This week on The Practicing Photographer, we're going to look at a way that you can feel really stupid. At least this is a way that I often feel really stupid. I've got a big, long list of those... What we're going to talk about this week is the diopter control. Now, you may already know where I'm going with this if you're familiar with your diopter control.
